1. INTRODUCTION

This document provides a functional and technical specification which sets out the requirements of Aeronautical Radio of Thailand Ltd. (AEROTHAI) in the Kingdom of Thailand for Voice Communication Control System (VCCS) to be installed at Suvarnabhumi Airport.

2. GENERAL

- 2.1 A computer-based VCCS shall be required for controlling (switching) and interfacing the intra-facility, and inter-facility voice communications used in the ATC operation (Detail as per Appendix 1: Suvarnabhumi Airport VCCS simplify diagram).
- 2.2 The voice communications employed in the Air Traffic Control comprise the air-to-ground VHF and UHF radio telephony as well as telephone communications. The VCCS central equipment shall be functionally separated into different modules.
- 2.3 The design shall allow the expansion of the system capacity by addition of units or modules.
- 2.4 The VCCS architecture shall be capable that there are a sufficient number of simultaneous voice paths to carry the maximum offered voice traffic.

3. WORKING POSITION

3.1 General

- 3.1.1 The working position shall consist of at least touch screen panel, foot push to talk (PTT) switch, loudspeakers, headset/handset access and headset/handset.
- 3.1.2 All the working positions shall be able to interface all radio lines and telephone lines.
- 3.1.3 Each working position shall be able to communicate with another working position by selecting a button on the panel and be directly connected to the predetermined working position (Intercom).
- 3.1.4 The tenderer shall provide Short Time (or Term) Recording function on the panel for each working position.
- 3.1.5 The Short Time (or Term) Recording function shall have a minimum duration of at least 60 minutes (60 minutes Radio and Telephone) for each working position.
- 3.1.6 According to ICAO ANNEX11, each VCCS workstation facility should be equipped with ambient noise recording facility, capable of retaining the information recorded during at least the last twenty-four hours of operation.

3.2 Touch Screen

- 3.2.1 The touch screen size shall not be less than 12.1 inches TFT-display with a resolution of at least 800x600 pixels associated with a touch-input device (TID).
- 3.2.2 The touch screen shall be a single unit with its own processor included and not require any external personal computer hardware.
- 3.2.3 Each access facility of touch screen shall consist of a button with facility label.
- 3.2.4 The touch screen shall be supported with a telephone button group (for G/G communications) and a radio button group (for A/G communications).
- 3.2.5 The touch screen shall give the status of radio channels and telephone lines, i.e. "busy state" , "call in" etc.
- 3.2.6 The telephone button group shall be integrated to some extent general control functions like conference, hold, etc.
- 3.2.7 To establish a dialled telephone connection, a dial pad shall be available.
- 3.2.8 The touch screen shall enable access to at least 8 radio frequencies simultaneous for transmission and reception by way of loudspeaker or headset/handset or both.
- 3.2.9 The frequency allocated to a radio channel shall be indicated with 6 digits plus decimal points (e.g. "119.075") or any other letter indicating the station symbol.
- 3.2.10 The RX button and TX button of radio frequency shall be provided.
- 3.2.11 The RX button shall be associated with each frequency assigned to the touch screen of working position.
- 3.2.12 By selecting the RX button on the radio button touch screen, the allocated radio channel shall be activated for the reception.
- 3.2.13 The TX button shall be associated with each frequency assigned to the touch screen of working position.
- 3.2.14 By selecting the TX button on the radio button touch screen, the allocated radio channel shall be selectable for the transmission.
- 3.2.15 Telephone communication access shall be activated via the telephone button.
- 3.2.16 Telephone button shall consist of Direct Access telephone button (DA) and Indirect Access telephone button (IA) functions.
- 3.2.17 Function button shall be separately provided from the Telephone button such as hold, conference, etc.

3.3 Headset/Handset

- 3.3.1 Both radio and telephone communications shall be operated via headsets or handsets.
- 3.3.2 The headset/handset accesses shall be provided by the Tenderer.

- 3.3.3 Socket pins assignment of the headsets or handsets at the working positions shall be provided at a minimum for microphone, ear-cap and PTT switch. One panel shall be 2 connectors for Controller and Instructor.
- 3.3.4 The instructor facility shall override both microphone and PTT of the controller.
- 3.3.5 The controller and the instructor ear-cap shall be permitted independent volume adjustment.
- 3.3.6 With the volume control in minimum position, the audio level shall be adjustable remain sufficient for monitoring purpose.
- 3.3.7 26 headsets and 26 handsets with handset holders shall be provided.

3.4. Loudspeakers

- 3.4.1 The loudspeaker audio level shall be adjustable by the volume control.
- 3.4.2 With the volume control in a minimum position, the audio level shall be adjustable remain sufficient for monitoring purpose.

4. VCCS CENTRAL EQUIPMENT

4.1. Radio Part

- 4.1.1 The select or deselect any radio frequency shall be accessed via radio button assigned to the working position for transmission and/or reception.
- 4.1.2 The presence of a received voice signal from the receivers shall be indicated (Squelch Indication).
- 4.1.3 The main and standby channels of radio transmitter shall be interlocked that only one of the channels will transmit at a time even though both channels have been inadvertently selected by the controller.
- 4.1.4 The radio transmission shall be activated when the operator push the PTT switch (Headset PTT switch or Handset PTT switch or Foot PTT switch).
- 4.1.5 When more than one radio channels are selected, the operator shall be able to transmit in the same time on all these channels by only pushing the PTT switch.
- 4.1.6 The radio shall provide the automatic muting the receiver when the transmitter is transmitting.
- 4.1.7 The radio frequency monitor shall enable any working position to monitor all radio traffic on channels that are available at the working position, even if they have been selected at other working positions.
- 4.1.8 The system shall be capable of interfacing with the digital transmission E1 format and VoIP

- 4.1.9 The VCCS shall provide Receiver Voting function (Best Signal Selection), which will automatically select a receiver with the best quality of signal within a group of minimum 6 receivers. And each signal shall be adjustable delay time upto 1,000 ms.
- 4.1.10 The best quality of signal will be selected by the evaluation of signal-to-noise ratio for analog and E1/ VOIP.
- 4.1.11 While the Receiver Voting function is in operation the operators may manually select a receiver of their choice.
- 4.1.12 The VCCS shall provide Automatic Transmitter Selection function when it is working together with Receiver Voting function.
- 4.1.13 While the Automatic Transmitter Selection function is in operation the operators may switch to manual selection whenever needed.
- 4.1.14 Faulty module(s) shall be immediately identified by the alarm indicator.
- 4.1.15 For safety reasons at maximum 2 radio channels shall be connected to one radio line interface module.

4.2 Telephone Part

- 4.2.1 When selecting a single DA, a connection shall be established to a predetermined destination.
- 4.2.2 The identity of the IA caller shall be displayed on the panel.
- 4.2.3 After establishing a DA and IA connection and prior to the acceptance of the call by the called terminal, a ring-back tone shall be sent to the calling user.
- 4.2.4 The Hold function shall be available for both DA and IA. (This function will enable a user to have more than one incoming or outgoing call set up simultaneously from a working position, but will only allow one call to be connected to the headset/handset at any one time.)
- 4.2.5 The Conference function shall be available for both DA and IA. (This function will enable a user to interconnect a number of working positions and/or lines of varying types, allowing full speech facilities to all connected parties. There will be a Conference button available, and it will be possible to initiate a conference independent of whether the first call is incoming or outgoing.)
- 4.2.6 The Transfer function shall be available for both DA and IA. (This function will enable any call made or received at a working position to be manually redirected to any other party.)
- 4.2.7 It shall be possible to make adjustable the signaling tone level.
- 4.2.8 Faulty module(s) shall be immediately identified by the alarm indicator.

- 4.2.9 The system shall be capable of interfacing with the VoIP (Voice over IP) telephony system and shall be connected to existing telephone via VoIP.
- 4.2.10 For safety reasons at maximum 2 telephone lines shall be connected to one telephone module.

4.3 Power Supply

- 4.3.1 Power supply of the central racks is fed from 3 sources, 2 AC and 1 DC.
- 4.3.2 A duplicated power supply shall be offered which will interface with a 210 – 230 Vac 50 - 60 Hz (ac power).
- 4.3.3 Each unit of the duplicated power supply shall have the capacity to feed the complete system.
- 4.3.4 The dc power system shall be provided by the tenderer with the capacity of at least 4 hours for both the VCCS central equipment and working positions.
- 4.3.5 In the event of both ac power failures, all the systems shall automatically switch over to a dc power supply without any interruption to the operation of the systems.
- 4.3.6 The input power of VCCS workstation facilities such as TED panel and interfacing communication equipments in Operation Rooms have two sources, AC/AC or AC/DC or DC/DC power. In the event of a power source failure, all the systems will automatically switch over to another power source without any interruption to the operation of the systems. The DC input power system has the capacity to feed all of VCCS workstation facilities for a minimum of 4 hours without any interruption to the operation of the systems.

5. SYSTEM INTERCONNECTION

- 5.1 The VCCS central equipment shall directly be interfaced with a main distribution frame : MDF (to be provided by Tenderer) where all necessary communications, as specified on Paragraph 4.1 and 4.2, are connected.
- 5.2 Lightning protection shall be provided for all radio and telephone lines at the MDF.
- 5.3 Interconnections between the working positions and the VCCS central equipment, as well as between the VCCS central equipment shall be provided.
- 5.4 The Tenderer shall be required to connect existing radio and telephone lines to the proposed systems and such connection be performed at a time advised by AEROTHAI.

6. TECHNICAL CONTROL UNIT (TCU)

- 6.1 The TCU shall be used for monitoring and configuration of the VCCS central equipment.

- 6.2 The TCU shall be installed with the VCCS central equipment in equipment rooms.
- 6.3 The TCU shall be at least equipped with a display, a keyboard, a mouse, a loading device, a color laser printer and software.
- 6.4 The TCU shall be equipped statistical package data for recorded traffic load on individual controller positions, telephone lines, radio channels.
- 6.5 The TCU software shall include facilities to record an event logging.
- 6.6 The TCU software shall be possible to extract the activity and event logging from the system in a suitable industry standard format without any way affecting the operational service.
- 6.7 All configuration data in the VCCS central equipment and TCU shall not disappear when the VCCS central equipment was turn off.
- 6.8 When the TCU application program is started up, the operator shall enter his/her login name and a password.
- 6.9 For security reason, the capability shall be provided for assigning difference access rights and level of access to the system and its database, based on the required function of the authorized.
- 6.10 The access right functions shall support the creation/update/modification of the access code for new or existing users.
- 6.11 Reconfiguration of the assigned radio channels for each working position shall be possible from the TCU.
- 6.12 Reconfiguration of the assigned frequency for a radio channel shall be possible from the TCU.
- 6.13 Reconfiguration of the assigned telephone channels for each working position shall be possible from the TCU.
- 6.14 Reconfiguration of telephone button assignments shall be possible from the TCU.
- 6.15 Reconfiguration of the telephone numbers of lines shall be possible from the TCU.
- 6.16 Reconfiguration for the adding/deleting for new working positions shall be possible from the TCU (Not exceed maximum capacity).
- 6.17 To make an online reconfiguration, different configurations shall be pre-programmed and called up from the TCU by way of menus.
- 6.18 The TCU shall raise an alarm, when malfunction of VCCS is detected.
- 6.19 If a malfunction of the VCCS is detected, an alarm shall be activated in both visual and audible on the TCU.
- 6.20 The failure message shall particularly contain at least type of failures, time of failures and equipment involved.

6.21 The VCCS equipment shall be accompanied with all VCCS licence software CDs.

7. VOICE RECORDING

- 7.1 The input/output of any received/transmitted voice signal from/to incoming/outgoing working position of both telephone and radio communication shall be available for recording to the provided voice recorder (Position Record)
- 7.2 The position ambient noise shall be available for recording on the provided voice recorder (Ambient Record)
- 7.3 Telephone/radio interfaces shall be available for recording by the provided voice recorder (Channels/Lines Record)
- 7.4 All cables and other accessories/tools using to connect recorded signal on item 7.1 7.2 and 7.3 to the voice recorder shall be provided by the tenderer.

8. SYSTEM CAPACITY

- 8.1 The total requirements of working positions shall be 26 positions (26 working positions which shall completely interface and fully operate with at least 50 existing working positions, 290 radio channels, 200 telephone channels, 100 E1 radio channels, 100 IP radio channels) as specified in the Appendix 2-3.
- 8.2 The specification of the 26 positions is for the new Approach room which shall be installed on 3rd floor of the Contingency building.
- 8.3 All 26 positions shall be completely interfaced and fully operate with:
 - (a) 18 existing positions in the Control Tower room on T7 floor.
 - (b) 7 existing positions on T5A of the Control Tower
 - (c) 3 existing Maintenance which shall be relocated from the present location to the 4th floor of the Contingency building.
- 8.4 The telephone channels interface/module shall be capable to interface with:
 - (a) 29 channels of 2-Wire voice call interface/module;
 - (b) 5 channels of 2-Wire telephone set interface/module;
 - (c) 166 channels of 2-Wire PSTN and PABX interface/module. as specified in Appendix 4.
- 8.5 The capacity of 4-Wire analog radio channels interface/module shall be at least 290 channels as specified in Appendix 5.
- 8.6 The capacity of E1 radio channels interface/module shall be at least 100 channels as specified in Appendix 6.
- 8.8 The capacity of VoIP radio channels interface/module shall be at least 100 channels as specified in Appendix 7.

9. ENVIRONMENTAL CONDITIONS

- 9.1 The VCCS equipment shall be able to operate in a controlled environment of approximately 10-40 °C and relative humidity of up to 70%.

10. TECHNICAL MANUAL

- 10.1 The VCCS shall be accompanied by technical manuals. (1 set of hard copy and 1 set of soft copy)
- 10.2 The technical manuals shall include details of installation, operation and maintenance instructions.

11. TRAINING

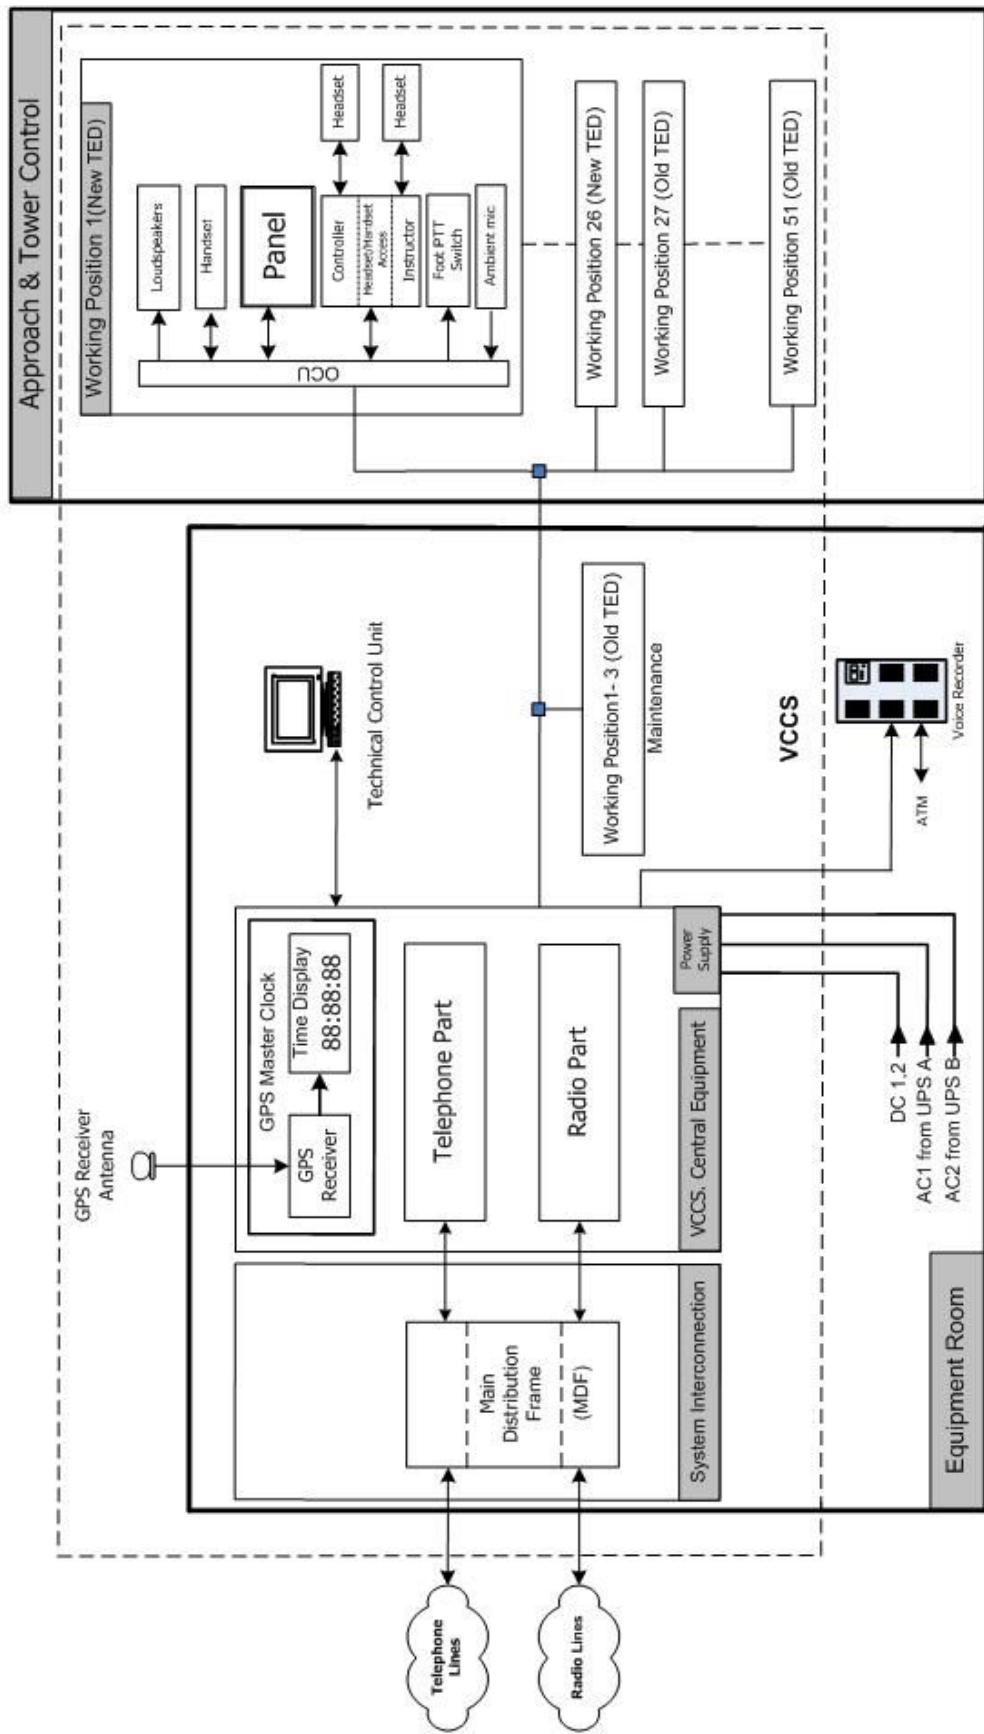

- 11.1 The factory training shall be provided in order to train AEROTHAI's engineers on the following capabilities:
- (a) To install the System, operate, maintain and diagnose the fault parts down to card (or module) level;
 - (b) To maintain, update and operate the operational software according to the requirements stated in this specifications;
 - (c) To utilize the support computer program facility in order to operate, maintain and configure the VCCS;
 - (d) To operate the ATC Functions.
- 11.2 The instruction and language used in training documentation shall be English.
- 11.3 The Tenderer shall arrange the factory training for at least 10 working days for at least 5 (Five) AEROTHAI's engineers at the factory.
- 11.4 The cost of travel and accommodation for the AEROTHAI's staff will be borne by AEROTHAI.
- 11.5 The Tenderer shall arrange on-the-job training for at least 5 days for AEROTHAI's engineers and ATC Operators who will operate the system.
- 11.6 The AEROTHAI engineers shall participate in the hardware and software installation.

12. INITIAL SPARE CARDS (OR MODULES)

- 12.1 The Tenderer shall provide initial spare parts for at least 10% of each type of cards/modules of the system.
- 12.2 If 10% of the initial spare parts are less than 1 unit, the Tenderer shall round up such initial spare parts to 1 unit.
- 12.3 The Tenderer shall propose itemized lists of the initial spare parts including the quantity suggested for each spare part against the total quantity of each in use in the system in accordance with the following format ONLY.

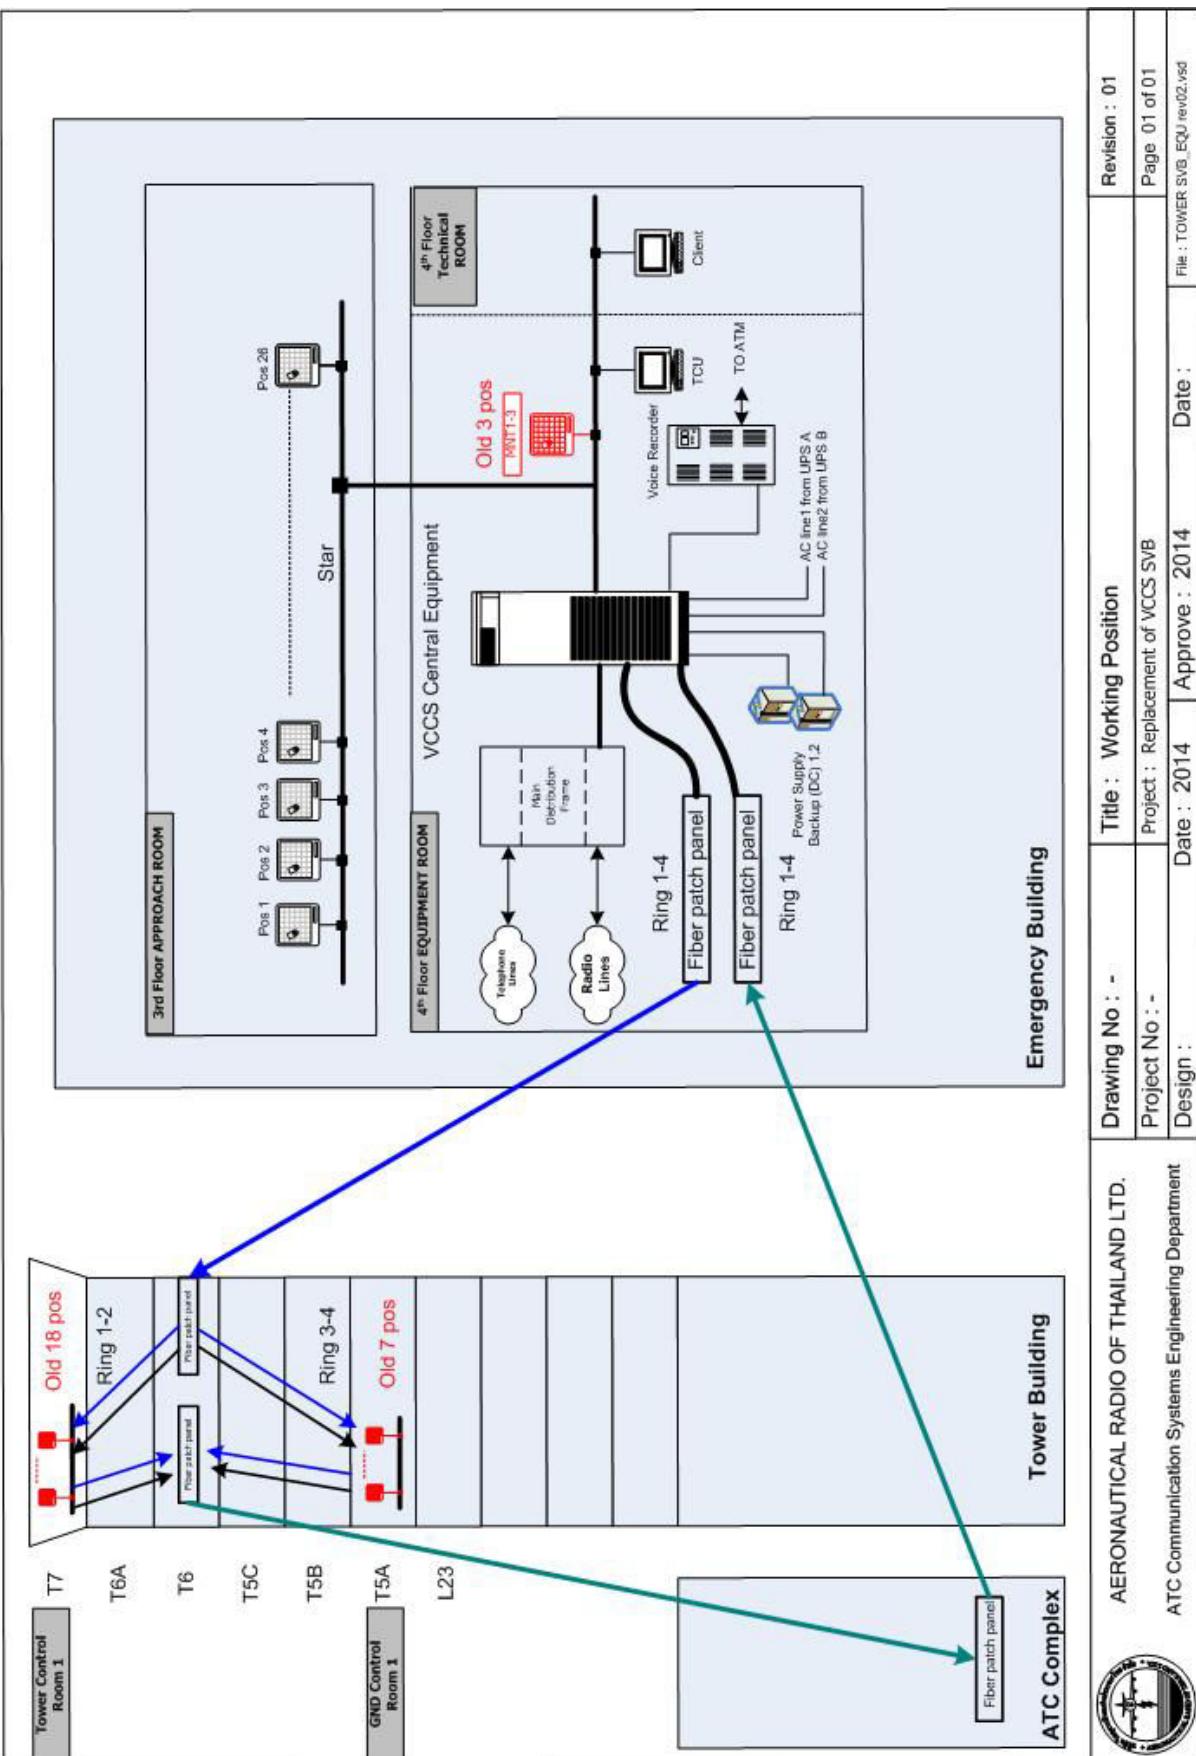

Initial Spare Parts					
Item No	Description	Part Number	Vendor	Qty in use	Qty as Spare
